# GOES Active Fire Detections - June 21, 2015

## Alaska Geographic Area (Interior Alaska)

Anaktuvuk Pass
Arctic Village
Kiana
Noorvik
Ambler
Selawik
Shungnak
Kobuk
Buckland
Bettles
Evansville
Venetie
Allakaket
Chalkyitsik
Fort Yukon
DERBY CREEK
THREE DAY
Hughes
ROCK
WEST FORK
Beaver
Huslia
TORMENT CREEK
Stevens Village
Circle
Rampart
SPICER CREEK
Koyukuk
Nulato
MOOSE POINT
Galena
Tanana
Central
BIRCH CREEK 2
Ruby
Manley Hot Springs
Kaltag
Fox
Ester
College
Fairbanks
North Pole
Moose Creek
SEVENTYMILE
Eagle
Eagle Village
Nenana
FISH CREEK
Anderson
KOBE
REX COMPLEX
GEA
Trans-Alaska Pipeline
GROUCH
Lake Minchumina
Big Delta
MICHIGAN CREEK
Delta Junction
HEALY LAKE
Healy
TANANA SLOUGH
Shageluk
Takotna
McGrath
Nikolai
Cantwell
IDITAROD RIVER
HICKEY CREEK
Tanacross
Tok
TETLIN HILLS
LONG LAKE
Northway
Crooked Creek
Red Devil
Sleetmute
Stony River
Talkeetna
Chistochina
Gulkana
Gakona
STINK RIVER
WHY LAKE
SOCKEYE
Willow
Chickaloon
Sutton
Copper Center
Houston
Wasilla
Palmer
Tonsina
Chitina
McCarthy
Knik
Lime Village
Anchorage
Valdez
Iyonek
Hope
Whittier
Tatitlek
Kenai

Ninilchik
Seward
Newhalen
New Stuyahok
Nikolaevsk
Ekwok
Anchor Point
Kachemak City
Igiugig
Homer
Levelock
Seldovia
Port Graham
Naknek
South Naknek
King Salmon
Egegik
Ouzinkie

This map, compiled by the USDA Forest Service Active Fire Mapping Program in cooperation with interagency and institution partners, displays the location and relative detection time of all types of all observable fires and other thermal activity through the specified date/time. Fire activity is identified from high temporal, synoptic view, multispectral observations collected by the GOES Imager instrument onboard geostationary NOAA GOES satellite platforms. GOES satellites, focused on eastern and western North America provide continual thermal observations of the continent at a rate of multiple times per hourly time period.

The Active Fire Mapping Program utilizes near real-time GOES imagery and derived data products provided by NOAA/NESDIS to construct this product. Fire activity visible at the time of satellite observation are identified and characterized at 4km spatial resolution using the latest version of the Wildfire Automated Biomass Burning Algorithm (WF ABBA). A detected fire does not necessarily mean that the entire area represented by the 4km pixel is on fire. A detection may be the result of intense fire activity covering a small fraction of the pixel area or fire activity occurring over a broader area. Fire detection omission/comission errors may occur due to input data anomalies, limited satellite observation conditions, and/or potential algorithm limitations.

Use of this map for other than its intended purpose may yield inaccurate or misleading results. The Forest Service attempts to use the most current and complete geospatial data available, and reserves the right to correct, update or modify geospatial inputs to this map without notification. For additional information, please contact the Forest Service Remote Sensing Applications Center (RSAC) at 801-975-3750.
